

Caveat: These communications are informative teaching instructions for those who seek to increase their understanding of themselves and the magnitude of the future lying before us all. These lectures are not of a religious nature but rather deal with the science of human potential and evolution. This document is a direct transcription from the original recording. Although it has been checked for obvious errors, it has not been finally edited.

Oxal: Greetings in the Light, my friends, I am Oxal.

I know that all of you have shown much interest of late in your night instruction sessions that you have attended, although you do not seem to remember. But, as you have been told before, to remember is not of any great importance for this can be triggered in your minds very easily by those who have the know-how.

Much of the information that has been coming to you in recent weeks and months has had to do with energy and matter. I suppose that it might seem strange to you that we should spend this much time upon one subject. But, my friends, this is a very important subject. In fact it encompasses much more than you realize, for when you understand the laws of energy and matter you have gained a great majority of the knowledge of what makes the universe function and what makes man function.

You see there is a great deal more to this than changing energy to matter and matter to energy, because there are many forms of matter or many densities of matter. Learning to control matter in its density will be something that in times to come, will be very important for you to know.

If your scientists had a thorough understanding of this, they would not have to wonder about the other planets. They could determine to a much more accurate degree what these planets and stars consist of and the type of life that exists thereon.

The density of matter has a great deal of importance. We could, by changing the density of a certain object of matter, cause it to be visible to your physical sight. You would be able to see it, to touch it, to feel it with your physical senses. But by slightly changing the density of this, none of your five senses would be able to detect it in any way.

So you see there are many densities of matter. Even some of your photographers' equipment will photograph densities that your eyes cannot see. This is why certain things have appeared upon photographic film when the photographer was not aware of it being there. So, density and matter cover a wide range of study.

In the times to come some of this information is going to be very important to you. There are going to be times in the near future when this knowledge will be your protection. It will save your lives, so to speak and when this information is needed it will be triggered and it will come to the surface and you will know it.

Now, I should like to tell you something that might be of interest to you. Very recently, I believe it was on a Wednesday last, all of you here, plus many more, some from the astral plane of your planet and many more who are now in the physical were taken in the spirit aboard our craft. You were given certain information, certain demonstrations, some of which we have triggered in the mind of the instrument. So we will let him tell you later some of what took place, rather than go into it now. We thought that this might be of interest to you. Some of you may have slight recollections of it. That is all that I will say at this moment concerning these things, except to assure you that these efforts of ours to instruct you, to bring Earth people into the proper consciousness, are not done for naught. It is something that will be very valuable to you in the future.

You will appreciate it very much at that time.

With that, I will leave you. I extend to each of you our deepest love and understanding and may each of you receive all of the fortification that you will need in the times that you have to face. Our love and our blessings we give to you. I am Oxal.

(About the Night Class of March 12 (Otagawa).)

Clyde: The morning after this class I recalled having been somewhere and that is about all. But after Oxal finished speaking I began to remember what had taken place.

We were in a large space or room with many other people. I couldn't identify this place as being part of the Otagawa nor do I remember going there. I was just there.

There was a huge screen there and on this screen was shown the formation of a planet in "time lapse" photography. But it still seems that it took quite some

time to view this. I imagine that this span of time covered millions of years.

First we saw a vast void. Then gases appeared and became various colors. Gradually this became more and more dense and gradually assumed more shape. It finally became a red hot mass of matter. Then it gradually cooled and began to darken a little and look like a real solid object. There were many colors. It was really very colorful and very beautiful.

A lot of water fell from clouds that had formed which made oceans, rivers and lakes. There were trees, forests, etc.. Then vegetation began to develop and animal and bird life appeared.

I do not know how they appeared there, whether they were brought there or not. They just seemed to be there. Then a few human beings appeared in the distance who seemed to be of a primitive nature. I mean by that, that they were dressed simply in skins and were living naturally. But not as we think of the prehistoric "cave man" Stone Age period. I do remember that I knew quite a few people that were present in this class. A few from the astral plane and others from the physical plane. ✿
